## ONE LAST TIME! Mole Day

An end to a long and wondrous era! The Chemistry Building has been in use for about 75 years (circa 1935) serving thousands upon thousands of chemistry students. Weathering the changes of time (political, economical, socially) and the "mishaps" of students (a little acid spill here, a tiny explosion there), this proud & noble building has set the stage for many future scientists! Resilient in structure, open and warm in attitude, this urban oasis of learning has been the ideal setting for many Student Demonstrations Shows, in other words indestructible! It is with great excitement and with heavy heart, that the Chemistry club presents its final Mole Day Show in this awesome building.

*Once again, it is time to start the show! Club President, John, and Vice-President, Ikenna, open with an attention grabber, "The lighting of Mg!"*

*The talented Chemistry Club members create a show full of wonder and information. Sublimation, Acid-Base Indicators, Exothermic decomposition reactions, elephant's toothpaste, and electrochemistry were just a few of the topics revealed.*

***MAGIC ONE, TWO, THREE!***

*Old Naussa Reaction  
demonstrating the "magic" of  
kinetics.*

***Got some cash to  
BURN????***

*Methane + Bubbles = FUN!!!*

*The Perfect ending!  
A cannon salute.  
Hi, Professor Phyllis.*

*A Glance Back at Some Wonderful Times with the  
Chemistry Club in the Old Chemistry Building.*
